Apex Trigger

1.Get Started with Apex Triggers

AccountAddressTrigger

```
trigger AccountAddressTrigger on Account (before insert, before update) {

    for(Account account:Trigger.New){
        if(account.Match_Billing_Address__c == True){
            account.ShippingPostalCode = account.BillingPostalCode;
        }
    }

}
```

2.Bulk Apex Triggers

ClosedOpportunityTrigger

```
trigger ClosedOpportunityTrigger on Opportunity (after insert, after update) {

    List<Task> taskList = new List<Task>();

    for(Opportunity opp: Trigger.New){
        if(opp.StageName == 'Closed Won'){
            taskList.add(new Task(Subject = 'Follow Up Test Task', WhatId = opp.Id));
        }
    }
    if(taskList.size() >0){
        insert taskList;
    }

}
```

Apex Testing

1.Get Started with Apex Unit Tests

VerifyDate Class

```apex
public class VerifyDate {

 //method to handle potential checks against two dates
 public static Date CheckDates(Date date1, Date date2) {
  //if date2 is within the next 30 days of date1, use date2.  Otherwise use the end of the month
  if(DateWithin30Days(date1,date2)) {
   return date2;
  } else {
   return SetEndOfMonthDate(date1);
  }
 }

 //method to check if date2 is within the next 30 days of date1
 private static Boolean DateWithin30Days(Date date1, Date date2) {
  //check for date2 being in the past
      if( date2 < date1) { return false; }

      //check that date2 is within (>=) 30 days of date1
      Date date30Days = date1.addDays(30); //create a date 30 days away from date1
  if( date2 >= date30Days ) { return false; }
  else { return true; }
 }

 //method to return the end of the month of a given date
 private static Date SetEndOfMonthDate(Date date1) {
  Integer totalDays = Date.daysInMonth(date1.year(), date1.month());
  Date lastDay = Date.newInstance(date1.year(), date1.month(), totalDays);
  return lastDay;
 }

}
```

TestVerifyDate Class

```apex
@IsTest
public class TestVerifyDate {

  @isTest static void date2within30daydate1() {
    Date returnDate1 = VerifyDate.CheckDates(date.valueOf('2022-06-14'),date.valueOf('2022-06-24'));
    System.assertEquals(date.valueOf('2022-06-24'), returnDate1);
  }
  @isTest static void date2NOTwithin30daydate1() {
    Date returnDate2 = VerifyDate.CheckDates(date.valueOf('2022-06-14'),date.valueOf('2022-07-24'));
    System.assertEquals(date.valueOf('2022-06-29'), returnDate2);
  }
}
```

2.Test Apex Triggers

RestrictContactByName Trigger

```
trigger RestrictContactByName on Contact (before insert, before update) {

 //check contacts prior to insert or update for invalid data
 For (Contact c : Trigger.New) {
  if(c.LastName == 'INVALIDNAME') {  //invalidname is invalid
    c.AddError('The Last Name "'+c.LastName+'" is not allowed for DML');
  }

 }

}
```

TestRestrictContactByName TestClass

```
@IsTest
public class TestRestrictContactByName {
   @IsTest static void createBadContact(){

      Contact c = new Contact(FirstName = 'John', LastName = 'INVALIDNAME');

      Test.startTest();
      Database.SaveResult result = Database.insert(c, false);
      Test.stopTest();

      System.assert(!result.isSuccess());
   }

}
```

3.Create Test Data for Apex Tests

RandomContactFactory Class

```
public class RandomContactFactory {

  public static List<Contact> generateRandomContacts(Integer num,String lastname){
     List<Contact> contactList = new List<Contact>();
     for(Integer i = 1;i<=num;i++){
        Contact ct = new Contact(FirstName = 'Test'+i,LastName =lastName);
        contactList.add(ct);
     }
     return contactList;
  }

}
```

Asynchronous Apex

1.Use Future Methods

AccountProcessor Class

```
public class AccountProcessor {
    @future
    public static void countContacts(List<Id> accountIds) {
        List<Account> accountsToUpdate = new List<Account>();
        List<Account> accounts = [Select Id, Name, (Select Id from Contacts) from Account Where Id IN :accountIds];
        For(Account acc:accounts){
            List<Contact> contactList = acc.Contacts;
            acc.Number_Of_Contacts__c = contactList.size();
            accountsToUpdate.add(acc);

        }
        update accountsToUpdate;
    }
}
```

AccountProcessorTest Class

```
@IsTest
private class AccountProcessorTest {
    @IsTest
    private static void testCountContacts() {
        Account newAccount = new Account(Name ='Test Account');
        insert newAccount;

        Contact newContact1 = new Contact(FirstName='John',
                            LastName='Doe',
                            AccountId=newAccount.Id);
        insert newContact1;

        Contact newContact2 = new Contact(FirstName='Jane',
                            LastName='Doe',
                            AccountId=newAccount.Id);
        insert newContact2;

        List<Id> accountIds = new List<Id>();
        accountIds.add(newAccount.Id);

        Test.startTest();
        AccountProcessor.countContacts(accountIds);
        Test.stopTest();

    }
}
```

2.Use Batch Apex

LeadProcessor Class

```
public without sharing class LeadProcessor implements Database.Batchable<sobject>, Database.Stateful {

    public Integer recordCount =0;

    public Database.QueryLocator start(Database.BatchableContext dbc) {
        return Database.getQueryLocator([SELECT Id, Name FROM Lead]);
    }

    public void execute(database.BatchableContext dbc, List<Lead> leads) {
        for(Lead l : leads) {
            l.LeadSource = 'Dreamforce';
        }
        update leads;
        recordCount = recordCount + leads.size();
    }

    public void finish (Database.BatchableContext dbc) {
        System.debug('Total records processed' + recordCount);
    }

}
```

LeadProcessorTest Class

```
@IsTest
private class LeadProcessorTest {

    @isTest
    private static void testBatchClass() {

        //Load test Data
        List<Lead> leads = new List<Lead>();
        for (Integer i =0; i<200; i++) {
            leads.add(new Lead(LastName='Connock', Company = 'Salesforce'));
        }
        insert leads;

        //Perform the Test
        Test.startTest();
        LeadProcessor lp = new LeadProcessor();
        Id batchId = Database.executeBatch(lp,200);
        Test.stopTest();

        //Check the Result
        List<Lead> updatedLeads = [SELECT Id FROM Lead WHERE Leadsource = 'Dreamforce'];
        System.assertEquals(200, updatedLeads.size(), 'ERROR: At Least 1 lead record not updated correctly');
    }
}
```

3.Control Processes with Queueable Apex

AddPrimaryContact Class

```apex
public class AddPrimaryContact implements Queueable{
    private Contact c;
    private String state;
    public AddPrimaryContact(Contact c,String state){
        this.c =c;
        this.state = state;
    }
    public void execute(QueueableContext context){
        List<Account> ListAccount = [SELECT Id, Name, (SELECT Id, FirstName, LastName FROM Contacts) FROM Account
WHERE BillingState =:
                        state LIMIT 200];
        List<Contact> lstContact = new List<Contact>();
        for (Account acc:ListAccount){
            Contact cont = c.clone(false, false, false, false);
            cont.Accountid = acc.id;
            lstContact.add(cont);
        }
        if(lstcontact.size()>0){
            insert lstcontact;
        }
    }
}
```

AddPrimaryContactTest Class

```apex
@isTest
public class AddPrimaryContactTest {
    @isTest static void TestList(){
        List<Account> Teste = new List<Account>();
        for(Integer i=0;i<50;i++){
            teste.add(new Account(BillingState ='CA', name = 'Test' +i));
        }
        for(Integer j=0;j<50;j++){
            Teste.add(new Account(BillingState ='NY', name= 'Test'+ j));
        }
        insert Teste;

        Contact co = new Contact();
        co.FirstName ='demo';
        co.LastName ='demo';
        insert co;
        String state = 'CA';

        AddPrimaryContact apc = new AddPrimaryContact(co, state);
        Test.startTest();
        System.enqueueJob(apc);
        Test.stopTest();
    }
}
```

4. Schedule Jobs Using the Apex Scheduler

DailyLeadProcessor Class

```
public class DailyLeadProcessor implements Schedulable{
   Public void execute(SchedulableContext SC){
       List<Lead> LeadObj= [SELECT Id from Lead where LeadSource=null limit 200];
       for(Lead l:LeadObj){
          l.LeadSource='Dreamforce';
          update l;
       }
   }

}
```

DailyLeadProcessorTest Class

```apex
@isTest
public class DailyLeadProcessorTest {
    static testMethod void testDailyLeadProcessor(){
        String CRON_EXP ='0 0 1 * * ?';
        List<Lead> lList = new List<Lead>();
        for (Integer i=0;i<200;i++){
            lList.add(new Lead(LastName = 'Dreamforce'+i, Company ='Test1 Inc.',
status='Open - Not Connected'));

        }
        insert lList;

        Test.startTest();
        string jobId = System.schedule('DailyLeadProcessor', CRON_EXP, new
DailyLeadProcessor());
    }

}
```

Apex Integration Services

1.Apex REST Callouts

AnimalLocator Class

```apex
public class AnimalLocator {
    public static String getAnimalNameById(Integer animalId) {
        String animalName;
        Http http = new Http();
        HttpRequest request = new HttpRequest();
        request.setEndpoint('https://th-apex-http-callout.herokuapp.com/animals/'+animalId);
        request.setMethod('GET');
        HttpResponse response = http.send(request);
        // If the request is successful, parse the JSON response.
        if(response.getStatusCode() == 200) {
            Map<String, Object> r = (Map<String, Object>)
                JSON.deserializeUntyped(response.getbody());
            Map<String, Object> animal = (Map<String, Object>)r.get('animal');
            animalName = string.valueOf(animal.get('name'));

        }
        return animalName;
    }
}
```

AnimalLocatorMock Mock Class

```apex
@isTest
global class AnimalLocatorMock implements HttpCalloutMock {
```

STEP 3: Synchronize Salesforce data with an external system

WarehouseCalloutService Class

```
public with sharing class WarehouseCalloutService implements Queueable {
    private static final String WAREHOUSE_URL = 'https://th-superbadge-apex.herokuapp.com/equipment';

    //Write a class that makes a REST callout to an external warehouse system to get a list of equipment that needs to be
    updated.
    //The callout's JSON response returns the equipment records that you upsert in Salesforce.

    @future(callout=true)
    public static void runWarehouseEquipmentSync(){
        System.debug('go into runWarehouseEquipmentSync');
        Http http = new Http();
        HttpRequest request = new HttpRequest();

        request.setEndpoint(WAREHOUSE_URL);
        request.setMethod('GET');
        HttpResponse response = http.send(request);

        List<Product2> product2List = new List<Product2>();
        System.debug(response.getStatusCode());
        if (response.getStatusCode() == 200){
            List<Object> jsonResponse = (List<Object>)JSON.deserializeUntyped(response.getBody());
            System.debug(response.getBody());

            //class maps the following fields:
            //warehouse SKU will be external ID for identifying which equipment records to update within Salesforce
            for (Object jR : jsonResponse){
                Map<String,Object> mapJson = (Map<String,Object>)jR;
                Product2 product2 = new Product2();
                //replacement part (always true),
                product2.Replacement_Part__c = (Boolean) mapJson.get('replacement');
                //cost
                product2.Cost__c = (Integer) mapJson.get('cost');
                //current inventory
                product2.Current_Inventory__c = (Double) mapJson.get('quantity');
                //lifespan
                product2.Lifespan_Months__c = (Integer) mapJson.get('lifespan');
                //maintenance cycle
                product2.Maintenance_Cycle__c = (Integer) mapJson.get('maintenanceperiod');
                //warehouse SKU
                product2.Warehouse_SKU__c = (String) mapJson.get('sku');

                product2.Name = (String) mapJson.get('name');
                product2.ProductCode = (String) mapJson.get('_id');
                product2List.add(product2);
            }

            if (product2List.size() > 0){
                upsert product2List;
                System.debug('Your equipment was synced with the warehouse one');
```

```
        }
      }
    }

    public static void execute (QueueableContext context){
        System.debug('start runWarehouseEquipmentSync');
        runWarehouseEquipmentSync();
        System.debug('end runWarehouseEquipmentSync');
    }

}
```

STEP 4: Schedule synchronization

WarehouseSyncSchedule Class

```
global with sharing class WarehouseSyncSchedule implements Schedulable {
    // implement scheduled code here
    global void execute (SchedulableContext ctx){
        System.enqueueJob(new WarehouseCalloutService());
    }
}
```

STEP 5: Test automation logic

https://github.com/minicruiser/Apex-Specialist-Superbadge/blob/main/step5 Test automation logic/MaintenanceRequest.clsMaintenanceRequest Trigger

```
trigger MaintenanceRequest on Case (before update, after update) {
    if(Trigger.isUpdate && Trigger.isAfter){
        MaintenanceRequestHelper.updateWorkOrders(Trigger.New, Trigger.OldMap);
    }
}
```

MaintenanceRequestHelper Class

```
public with sharing class MaintenanceRequestHelper {
    public static void updateworkOrders(List<Case> updWorkOrders, Map<Id,Case> nonUpdCaseMap) {
        Set<Id> validIds = new Set<Id>();
        For (Case c : updWorkOrders){
            if (nonUpdCaseMap.get(c.Id).Status != 'Closed' && c.Status == 'Closed'){
                if (c.Type == 'Repair' || c.Type == 'Routine Maintenance'){
                    validIds.add(c.Id);
                }
            }
        }

        //When an existing maintenance request of type Repair or Routine Maintenance is closed,
        //create a new maintenance request for a future routine checkup.
        if (!validIds.isEmpty()){
```

```
        Map<Id,Case> closedCases = new Map<Id,Case>([SELECT Id, Vehicle__c, Equipment__c,
Equipment__r.Maintenance_Cycle__c,
                                (SELECT Id,Equipment__c,Quantity__c FROM Equipment_Maintenance_Items__r)
                                FROM Case WHERE Id IN :validIds]);
        Map<Id,Decimal> maintenanceCycles = new Map<ID,Decimal>();

        //calculate the maintenance request due dates by using the maintenance cycle defined on the related equipment
records.
        AggregateResult[] results = [SELECT Maintenance_Request__c,
                        MIN(Equipment__r.Maintenance_Cycle__c)cycle
                        FROM Equipment_Maintenance_Item__c
                        WHERE Maintenance_Request__c IN :ValidIds GROUP BY Maintenance_Request__c];

        for (AggregateResult ar : results){
            maintenanceCycles.put((Id) ar.get('Maintenance_Request__c'), (Decimal) ar.get('cycle'));
        }

        List<Case> newCases = new List<Case>();
        for(Case cc : closedCases.values()){
            Case nc = new Case (
                ParentId = cc.Id,
                Status = 'New',
                Subject = 'Routine Maintenance',
                Type = 'Routine Maintenance',
                Vehicle__c = cc.Vehicle__c,
                Equipment__c =cc.Equipment__c,
                Origin = 'Web',
                Date_Reported__c = Date.Today()
            );

            //If multiple pieces of equipment are used in the maintenance request,
            //define the due date by applying the shortest maintenance cycle to today's date.
            //If (maintenanceCycles.containskey(cc.Id)){
                nc.Date_Due__c = Date.today().addDays((Integer) maintenanceCycles.get(cc.Id));
            //} else {
            //    nc.Date_Due__c = Date.today().addDays((Integer) cc.Equipment__r.maintenance_Cycle__c);
            //}

            newCases.add(nc);
        }

        insert newCases;

        List<Equipment_Maintenance_Item__c> clonedList = new List<Equipment_Maintenance_Item__c>();
        for (Case nc : newCases){
            for (Equipment_Maintenance_Item__c clonedListItem :
closedCases.get(nc.ParentId).Equipment_Maintenance_Items__r){
                Equipment_Maintenance_Item__c item = clonedListItem.clone();
                item.Maintenance_Request__c = nc.Id;
                clonedList.add(item);
            }
        }
        insert clonedList;
    }
```

```
    }
}
```

MaintenanceRequestHelperTest Class

```apex
@isTest
public with sharing class MaintenanceRequestHelperTest {

  // createVehicle
  private static Vehicle__c createVehicle(){
    Vehicle__c vehicle = new Vehicle__C(name = 'Testing Vehicle');
    return vehicle;
  }

  // createEquipment
  private static Product2 createEquipment(){

```

STEP 6: Test callout logic

WarehouseCalloutService Class

```
public with sharing class WarehouseCalloutService implements Queueable {
   private static final String WAREHOUSE_URL = 'https://th-superbadge-apex.herokuapp.com/equipment';

   //Write a class that makes a REST callout to an external warehouse system to get a list of equipment that needs to be
updated.
   //The callout's JSON response returns the equipment records that you upsert in Salesforce.

   @future(callout=true)
   public static void runWarehouseEquipmentSync(){
      System.debug('go into runWarehouseEquipmentSync');
      Http http = new Http();
      HttpRequest request = new HttpRequest();

      request.setEndpoint(WAREHOUSE_URL);
      request.setMethod('GET');
      HttpResponse response = http.send(request);

      List<Product2> product2List = new List<Product2>();
      System.debug(response.getStatusCode());
      if (response.getStatusCode() == 200){
         List<Object> jsonResponse = (List<Object>)JSON.deserializeUntyped(response.getBody());
         System.debug(response.getBody());

         //class maps the following fields:
         //warehouse SKU will be external ID for identifying which equipment records to update within Salesforce
         for (Object jR : jsonResponse){
            Map<String,Object> mapJson = (Map<String,Object>)jR;
            Product2 product2 = new Product2();
            //replacement part (always true),
            product2.Replacement_Part__c = (Boolean) mapJson.get('replacement');
            //cost
            product2.Cost__c = (Integer) mapJson.get('cost');
            //current inventory
            product2.Current_Inventory__c = (Double) mapJson.get('quantity');
            //lifespan
            product2.Lifespan_Months__c = (Integer) mapJson.get('lifespan');
            //maintenance cycle
            product2.Maintenance_Cycle__c = (Integer) mapJson.get('maintenanceperiod');
            //warehouse SKU
```

```
        product2.Warehouse_SKU__c = (String) mapJson.get('sku');

        product2.Name = (String) mapJson.get('name');
        product2.ProductCode = (String) mapJson.get('_id');
        product2List.add(product2);
    }

    if (product2List.size() > 0){
        upsert product2List;
        System.debug('Your equipment was synced with the warehouse one');
    }
    }
}

    public static void execute (QueueableContext context){
        System.debug('start runWarehouseEquipmentSync');
        runWarehouseEquipmentSync();
        System.debug('end runWarehouseEquipmentSync');
    }

}
```

WarehouseCalloutServiceMock Class

```
@isTest
global class WarehouseCalloutServiceMock implements HttpCalloutMock {
    // implement http mock callout
    global static HttpResponse respond(HttpRequest request) {

        HttpResponse response = new HttpResponse();
        response.setHeader('Content-Type', 'application/json');
        response.setBody('[{"_id":"55d66226726b611100aaf741","replacement":false,"quantity":5,"name":"Generator 1000
kW","maintenanceperiod":365,"lifespan":120,"cost":5000,"sku":"100003"},{"_id":"55d66226726b611100aaf742","replacement":tr
ue,"quantity":183,"name":"Cooling
Fan","maintenanceperiod":0,"lifespan":0,"cost":300,"sku":"100004"},{"_id":"55d66226726b611100aaf743","replacement":true,"qu
antity":143,"name":"Fuse 20A","maintenanceperiod":0,"lifespan":0,"cost":22,"sku":"100005"}]');
        response.setStatusCode(200);

        return response;
    }
}
```

WarehouseCalloutServiceTest Class

```apex
@IsTest
private class WarehouseCalloutServiceTest {
    // implement your mock callout test here
    @isTest
    static void testWarehouseCallout() {
        test.startTest();
        test.setMock(HttpCalloutMock.class, new WarehouseCalloutServiceMock());
        WarehouseCalloutService.execute(null);
        test.stopTest();

        List<Product2> product2List = new List<Product2>();
        product2List = [SELECT ProductCode FROM Product2];

        System.assertEquals(3, product2List.size());
        System.assertEquals('55d66226726b611100aaf741', product2List.get(0).ProductCode);
        System.assertEquals('55d66226726b611100aaf742', product2List.get(1).ProductCode);
        System.assertEquals('55d66226726b611100aaf743', product2List.get(2).ProductCode);
    }
}
```

STEP 7: Test scheduling logic

WarehouseCalloutServiceMock Class

```apex
@isTest
global class WarehouseCalloutServiceMock implements HttpCalloutMock {
    // implement http mock callout
    global static HttpResponse respond(HttpRequest request) {

        HttpResponse response = new HttpResponse();
        response.setHeader('Content-Type', 'application/json');
        response.setBody('[{"_id":"55d66226726b611100aaf741","replacement":false,"quantity":5,"name":"Generator 1000 kW","maintenanceperiod":365,"lifespan":120,"cost":5000,"sku":"100003"},{"_id":"55d66226726b611100aaf742","replacement":true,"quantity":183,"name":"Cooling Fan","maintenanceperiod":0,"lifespan":0,"cost":300,"sku":"100004"},{"_id":"55d66226726b611100aaf743","replacement":true,"quantity":143,"name":"Fuse 20A","maintenanceperiod":0,"lifespan":0,"cost":22,"sku":"100005"}]');
        response.setStatusCode(200);

        return response;
    }
}
```

WarehouseSyncSchedule Class

```
global with sharing class WarehouseSyncSchedule implements Schedulable {
   // implement scheduled code here
   global void execute (SchedulableContext ctx){
       System.enqueueJob(new WarehouseCalloutService());
   }
}
```

WarehouseSyncScheduleTest Class

```
@isTest
public with sharing class WarehouseSyncScheduleTest {
   // implement scheduled code here
   //
   @isTest static void test() {
       String scheduleTime = '00 00 00 * * ? *';
       Test.startTest();
       Test.setMock(HttpCalloutMock.class, new WarehouseCalloutServiceMock());
       String jobId = System.schedule('Warehouse Time to Schedule to test', scheduleTime, new WarehouseSyncSchedule());
       CronTrigger c = [SELECT State FROM CronTrigger WHERE Id =: jobId];
       System.assertEquals('WAITING', String.valueOf(c.State), 'JobId does not match');

       Test.stopTest();
   }
}
```
